**2. Commodity Charge: \*\*\*Cap customized for each Customer\*\*\***

- For single family residential users the monthly commodity charge will be based on winter water usage subject to the limitations of the sewer cap which is set annually each July 1. The sewer cap will be derived using 100% of the water usage for the lowest billing period (two months) during the wet winter months, October through April. If that calculation yields a number less than eight (8) units, the cap will be set at eight units.
- Each billing period the single family residential customer sewer commodity charge will be calculated by using 100% of the water used during that billing period by the single family commodity rate in effect. If the 100% calculation yields a water usage amount that exceeds the individual customer's cap, the customer will be billed for the cap amount. The cap will not apply in calculating the commodity charge for residential customers who have installed sub-meters or irrigation meters where household use without irrigation can be calculated.
