

San Diego Gas and Electric offers opportunities to conserve energy and save.
June 2011

Are you ready to save energy at home?

Start with SDG&E's Home Energy Efficiency Survey!

Warmer months are here and you'll probably be using more energy to stay cool. Unfortunately, turning down the thermostat on your air conditioner may mean an increase in your energy bill. Whether you live inland or on the coast, you can stay comfortable and save money by using energy more efficiently. In fact, you might be surprised at how simple changes can make a big difference.

But before you can find out how to save, you need to know where you're using energy. Start by taking SDG&E's Home Energy Efficiency Survey. The free, online questionnaire takes about 25 minutes to complete and, once you're done, you'll not only see how your home uses energy but you'll get a customized report with suggestions on ways you can save. To get started, grab a copy of your recent SDG&E® bill and visit www.sdge.com/saveenergy. Paper copies of the survey are available by calling 1-800-411-7343. For more information and tips, including rebates and incentives, visit www.sdge.com/saveenergy.

Summer Saver helps SDG&E® customers save energy during warm temps

Warmer weather often means higher energy bills, as many people turn up their air conditioners to beat the summer heat. Now you can keep your cool – and save energy and money – by signing up with SDG&E's Summer Saver program.

Summer Saver is a no-cost, energy-saving program that rewards you for reducing electricity use during warmer months when demand is highest. Thousands have already realized its importance along with its valuable personal benefits.

It's simple! A small device is connected to your HVAC unit by one of SDG&E's authorized contractors. The installation is fast, easy – and free. On select days when increased energy use or other factors threaten electric reliability, SDG&E® signals the device to cycle your air conditioner on and off for a few hours – which helps maintain electric reliability and earn you a bill credit at the end of the year.

The sooner you sign up, the bigger your annual incentive, so become a Summer Saver today! For more information and to enroll, visit www.sdge.com/summersaver and have your SDG&E account number handy.

Energy Upgrade™ California makes home improvements more affordable.
Get up to \$4,000 in incentives for making home energy upgrades!

Your energy-saving home improvements may be more affordable than ever with the help of Energy Upgrade California.

This new program offers incentives of up to \$4,000 for qualified upgrades that improve your home's energy efficiency and lowers your energy bills. If you own an existing single-family detached home, there are two ways you can participate in Energy Upgrade California:

The Basic Path: You may receive a \$1,000 incentive if you have an eligible contractor complete all six of the following items:

- Seal attic air leaks
- Install attic insulation
- Seal leaky air ducts for central heating and air conditioning system
- Insulate hot-water pipes
- Test natural gas appliances for correct venting and certify combustion safety
- Install a thermostatic shut-off valve on shower to save hot water

The Advanced Path: You may receive incentives ranging from \$1,250 for 10% energy savings to \$4,000 for 40% energy savings when an eligible contractor installs a comprehensive mix of measures based on a pre-approved work plan. A certified Home Energy Efficiency Rater must evaluate the overall energy savings that would be achieved based on the combination of measures installed. Examples of eligible measures include high-efficiency heating and cooling systems, energy efficient windows and skylights, and tankless or solar water-heating systems.

Get started now. To learn more, visit www.sdge.com/energyupgradecalifornia . Before contacting participating contractors, you'll also need to take a few minutes to complete SDG&E's Home Energy Efficiency Survey, which is available online at www.sdge.com/homeanalysis or by calling 800-644-6133.

Swimming pool owners: Are you ready to dive into savings?

SDG&E® offers \$200 rebates on qualifying energy efficient pool pumps. Did you know that swimming pool pumps can use more energy and cost more to run than *every* appliance in your home *combined*? That's a lot of money – and energy – you're using to keep your pool clean. But what's the alternative? Installing an energy efficient pool pump!

SDG&E® offers \$200 rebates on qualifying variable-speed pool pumps. In addition to the rebate, you can save up to 70 percent on the costs of the energy required to run your pump, so the savings can really add up. Another benefit is that they'll keep your pool cleaner, clearer and healthier. If you're still not convinced, you should know that they last longer, too, because they are generally made of non-corrosive, more durable materials.

To learn more about which pool pump models qualify, as well as additional energy saving tips and rebates, visit www.sdge.com/saveenergy .

Buy, recycle and save with SDG&E® rebates and incentives.
Lower your energy bill and save cash along the way!

Thanks to SDG&E® rebates, consumers can save energy and money on the purchase of energy efficient refrigerators, clothes washing machines, dishwashers, freezers, room air conditioners, and much more. Rebates range from \$25 to \$200 depending on the appliance.

When combined with incentives offered by manufacturers, retailers or SDG&E, you can save even more. For example, additional SDG&E incentives include \$50 for recycling an old, working refrigerator or freezer, and \$25 for qualifying room air conditioners.

For a complete list of rebates and appliances, and for more information on SDG&E incentives, go to www.sdge.com/saveenergy.
